This compilation is an outcome of a field study undertaken by students of the 7th semester B. Arch. programme at the GITAM School of Architecture, Visakhapatnam in 2025. As part of the elective course Introduction to Architectural Conservation, the students documented five historic houses of the 20th Century CE.

Veronica Siemon  
Tata Sai Naga Manoj

**Photographs:** Vamsi Konathala (unless specified)

**Sketches:** Nikhil Sai Kumar

Sincere thanks to P Venkata Rama Reddy and N Aditya Madhav for their support in this documentation project; Associate Professor Ravindra Patnayaka and student Velamarthi Ganesh for their assistance with the site visit; Uma Devi Saladi for her help in finding a poem on Bheemili.

Five houses of Bheemili

## **Preface**

Bheemili is a historic coastal town near Visakhapatnam that abounds in heritage spanning different time periods. It is a prime example for studying and understanding coastal settlements.

This study was curated as a learning experience to sensitize students to the layered histories of such settlements.

Students began with documenting five houses of Bheemili from the early 20th century that are suffering from escalating land values and uncertain ownership. The team put together measured drawings, photographic documentation, informal conversations with local residents, and archival research to understand the architectural character and cultural significance of these houses.

This compilation presents our findings. It aims to serve both as a student-led

contribution to the documentation of Bheemili's heritage and as an academic resource for further research on old coastal towns.

We aim to curate documentation of other sites that will serve to generate awareness and sensitization towards heritage.

...

Lapping itself in several folds  
The Sea seems a primordial man  
Swathing under its watery covers.  
Like somebody tickling you trying to wake up  
When the sun was high on the sky  
The Sea moves languorously  
Spraying smiles of surf all around.  
Sprinting up to beach sands, terrain,  
And swaying with its frothy bubbles,  
Resembling the anklet bells of a baby,  
It appears like a silken cloudlet aground.  
With its eons-old eagerly looks  
It dreamily awaits the first baby-boats  
Which tossed over its chest.

...

### **Brief history of Bheemili:**

Bheemili, also known as Bheemunipatnam, is believed to be named after Bhima, the legendary Pandava brother from the Mahabharata. Nestled along the eastern coast of India, Bheemili is a place where land, ocean, river, and hills meet, witnessing centuries of interplay of nature and culture. Together with Visakhapatnam, it forms a 24 km coastal strip characterized by diverse geomorphic landforms.

The oldest remains in Bheemili date back to the 3rd century BCE in its hills of Pavurallakonda. Excavations have unearthed rock-cut cisterns designed for collecting rainwater, alongside remnants of vihara foundations of the once vibrant

Buddhist community. Artefacts from this period, including coins and pottery, tell tales of trade and cultural exchange, marking Bheemili as a significant site during ancient times. By the 14th century, under the reign of the Mindi kings, a temple dedicated to Narasimha was erected, adding another layer to the town's sacred landscape.

The early-17th century saw the arrival of the Dutch East India Company, who established a fort and a factory in Bheemili. This marked a pivotal moment in the town's history, as it became a hub of trade and commerce. Following the Dutch, the British East India Company recognized Bheemili as a significant

trading port on the eastern coast. This contributed to Bheemili's status as one of the oldest municipalities in India. Today, remnants of this colonial past can still be seen in Bheemili. The Dutch cemetery, St. Peter's Church, the Clock Tower, and other structures stand as silent testimony to the town's vibrant history. Diverse residential typologies, from fishermen's shelters, traditional houses of the 19th and 20th centuries to modern houses can be found here.

### One: *Manduva* memories

Just a street away from the busy vegetable market and near the iconic Bheemili clock tower, the house stands as a testament to the previous century. Surrounded by modern homes, this house showcases the *manduva logili* architectural style, a typology common throughout the Andhra region, though only remnants of its original glory remain.

The house follows a rectangular layout, with a central square courtyard bracketed by two linear buildings. A front yard acts as a transitional space, inviting the outdoors into the home. To the south lies the kitchen. The house has been divided into four sections for rental purposes.

On one side of the courtyard, a storeroom sits between the two houses, and a well is conveniently located on the other, adjacent to the bathrooms. A staircase leads up to the sloped roof, providing access to overhead tanks and ensuring maintenance can be performed when needed. The walls are made of stone, with plaster crafted from a mix of melted karakkai and other indigenous materials. Over time, some of the original plaster has worn away, replaced by modern cement plaster during repairs.

Wooden supports for the beams and rafters, along with clay tiles for roofing, add to the house's character. Although the

corridors are narrow and the rooms small, they feel spacious due to their adjacency to the central courtyard and front yard. These outdoor spaces are primarily used during the day, creating an illusion of extended living areas.

The owner plans to demolish the house for redevelopment; however, this structure signifies the architectural essence of the early twentieth century and holds potential for adaptive reuse.

## Two: House with *arugu*

The house, nearly a century old, belongs to Kaallakuri Prakash Rao and Mrs. Kallakuri Ramanamma. It has weathered the storms of time and nature, standing resiliently close to the coastline. A sitting space known as *arugu* (verandah) graces the front of the house, where neighbours gather to chat and connect, showcasing a lifestyle where outdoor semi-open spaces are integral to daily living.

A courtyard to the rear of the house hosts utility areas, including water drums and potted plants, along with a sacred tulsi plant that thrives in the sunlight. At the back, a well, operated with a motor, provides water to a tank within the house. A facade of wooden jaali once

adorned the courtyard, now covered with cardboard to shield it from harsh weather conditions. Although the house features two entrances, only one is currently in use, and three of the rooms remain vacant. The doors are made of solid wood, and the walls are notably thicker than those of modern houses, measuring between a quarter to nearly half a meter thick.

As one steps inside, a narrow entrance leads into a large living room serving as the focal point of the home. It connects to the courtyard, providing access to the staircase and a terrace. Inside, one can observe jack arch roofs. Small openings and windows throughout the house ensure cross-ventilation, a crucial feature

in humid coastal zones. Indigenous materials define the construction of this home: visible brick masonry, plaster, Mangalore tiles for roofing, and wooden trusses.

Though the house shows signs of wear, loss of masonry, plaster, and some roofing, it still stands resolutely in the face of time.

### Three: *Panchavati* house

Located on Gupta Street, known for its literary community, the house stands proudly near the clock tower in Bheemili and in close proximity to a temple. Built around a century ago in the *Panchavati* architectural style, this house once featured a central courtyard flanked by mirrored blocks. Today, only one block and the courtyard remain intact, while the other half has been replaced by a new structure.

The term '*Panchavati* style house' as the resident describes, homes inspired by the serene forest dwelling of Rama and Sita from the Indian epic, the Ramayana. This style emphasizes a connection to nature.

Inside, the house features two bedrooms, a hallway, a kitchen at the rear, and two smaller rooms, along with a toilet. A welcoming verandah greets visitors at the entry point, leading up a small staircase to the central entrance. The facade is elegantly balanced, adorned with five arches in a row and a staircase leading to the plinth.

The doors and windows, crafted from wood and iron grills, may show signs of wear, but they still reflect the traditional style of the era in which the house was built. Above the arches, a low parapet wall is decorated with cast iron railings featuring floral and spiral patterns.

Constructed as a traditional masonry building, the house combines flat and sloped roofing. The walls are made of brick masonry, finished with lime mortar and plaster. Over the years, the plaster has aged naturally, revealing stains, patches of dampness, and areas where the finish has worn away, exposing the underlying masonry. The floor, made of lime concrete, is marked by cracks and subtle undulations, a testament to decades of use.

Despite the changes over the years, the old courtyard and the original front portion of the house remain unchanged. The courtyard continues to be the heart of the home, open to the sky and allowing fresh air and natural

light to flow through, fostering a sense of connection between the rooms.

#### Four: Host to *Lavana Satyagraha*

Located in a densely packed neighborhood, this house stands out amidst a mix of vernacular and modern architectural styles. Built in 1911, this structure is notable for its striking blue windows and jaalis, setting it apart from the modern tones of the neighboring houses. The house holds historical significance as Mahatma Gandhi visited and stayed here during the *Lavana Satyagraha* movement, adding a rich layer of associational value to its architecture.

The roof features a unique combination of flat sections over corridors and passageways, complemented by pitched roofs over the bedrooms, creating an eye-catching elevation. Upon entering, visitors navigate through narrow rooms that open

up into a courtyard adorned with arched columns, leading to an open skylight above. The layout is rectangular, centered around this courtyard that invites natural light and fresh air.

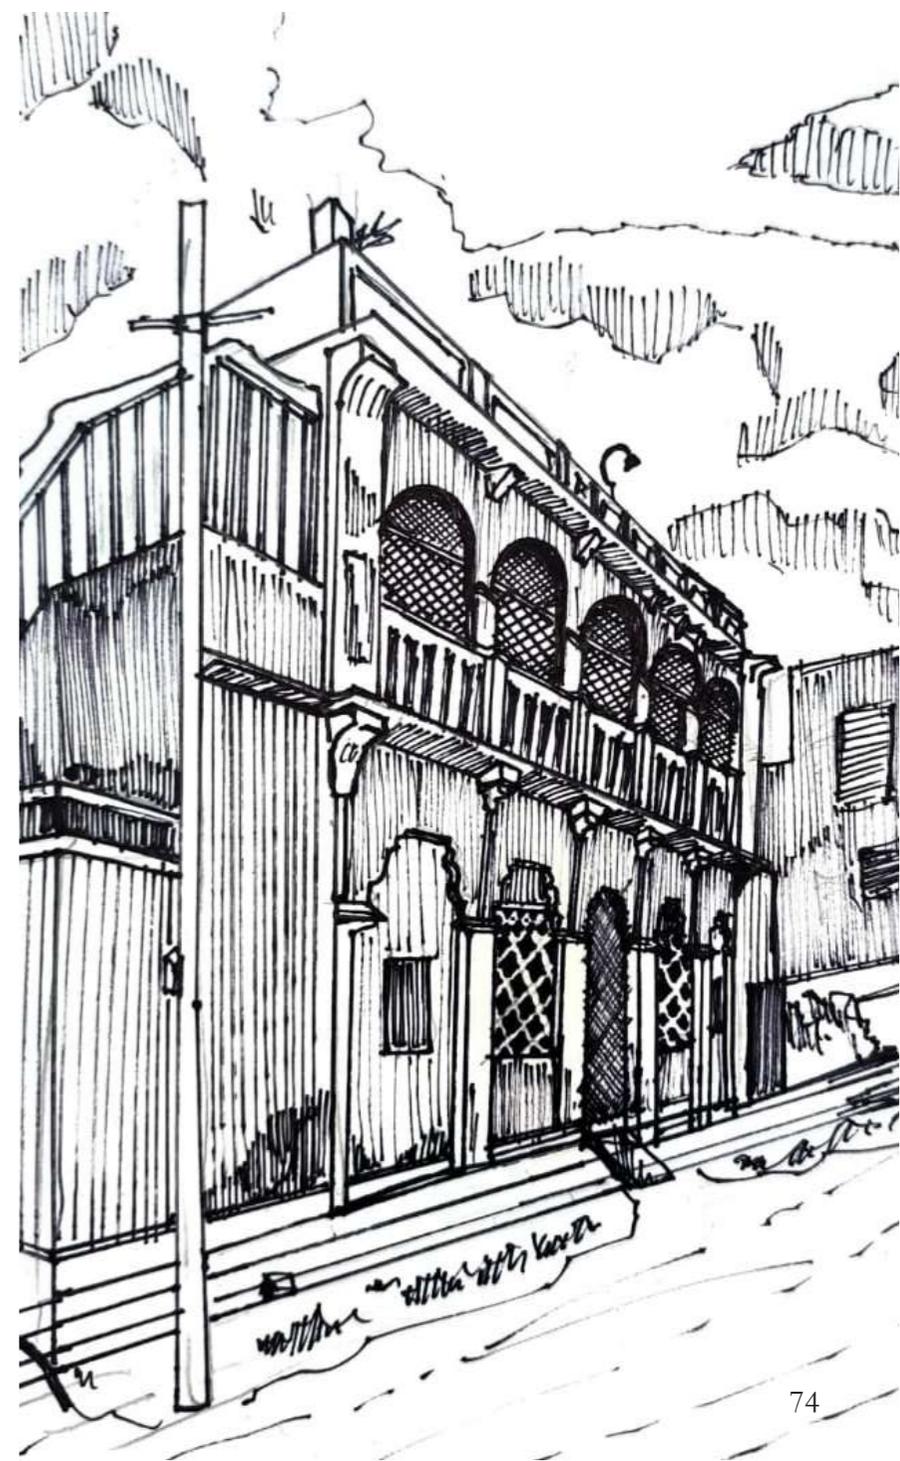

The house comprises a total of 13 rooms. All rooms are spacious, featuring small windows that ensure adequate ventilation. The central courtyard has experienced some leveling over the years due to maintenance issues, but a small square area still retains its original essence. The plan remains consistent across both floors, with a staircase outside connecting to the upper level.

The facade is characterized by multifoiled arches framing the windows and doors, while the upper floor balcony showcases

jaali panels adorned with floral and geometric motifs. Horizontal cornices run across the facade, creating layered shadow play, supported by small ornamental brackets. The ground floor openings are protected by intricate wrought-iron grills, featuring geometric and floral patterns. Molded stucco bands and decorative frames around the arches enhance depth and rhythm on the otherwise plain walls. Despite the passage of time, the house remains strong, and the owner plans to reuse it as a guest house in the future, ensuring that this historic structure continues to be a part of the community's story.

#### Five: House with a *tulasi kota*

A stone's throw from the seashore and the mouth of the Gosthani River, this house belongs to an elderly lady who proudly shared that it has been in her family for nearly four generations. Built in a linear form, the structure features a sloped roof and a central linear courtyard.

The house has a verandah with seating provision at one end. The roof of the entry area is supported by sturdy wooden rafters, beams, and three round columns. On the left side, a small room with a low-heighted double door adds an interesting touch. From the verandah, another double door leads into a linear living area, which serves as the spine of the house, with various rooms and functional spaces zoned along it.

To the right of this central spine, a series of rooms unfolds, including two interconnected bedrooms. The living room is brightened by an opening in the roof that allows natural light to flood the space, although this design presents challenges during the rainy season.

Beyond the living room, the corridor runs adjacent to the courtyard, with a bathroom accessible from the courtyard on the left. The courtyard, which is one step lower than the corridor, houses a small water tank and a *tulasi kota*, a sacred space for the family. On the opposite side of the corridor, a room and a kitchen are situated, leading to another room or backyard at the far end, which was inaccessible during the visit.

The walls of the house are thick, constructed of brick and plastered with lime, while the sloping roof is supported by wooden beams and rafters, topped with Mangalore tiles. All doors and windows are crafted from wood, featuring minimal detailing.

The elderly lady expresses her desire to remain in this cherished home for the rest of her life, grateful to her daughter for respecting this wish and for staying by her side to provide care and companionship.
